Homeland Security & Cybersecurity

Aviation Infrastructure

- The **US Aviation Transportation System** is comprised of aircraft, air traffic control systems, and approximately 450 US commercial airports and 19,000 public airfields.
- The air traffic control system, formally known as the **National Airspace System**, consists of more than 690 air traffic control facilities and associated radar and communication systems, plus about 11,000 air navigation facilities.

US Aviation System

- 450 US commercial airports
- 19,000 public airfields
- 690 air traffic control facilities
- 11,000 air navigation facilities

Homeland Security & Cybersecurity

Aviation Infrastructure

Together, these systems see to it that more than **23,750 domestic flights** carrying more than **2.1 million passengers** arrive safely at their destination **each day**.

Aviation Infrastructure

- Security for the Air Transportation System is regulated under Title 49 of the Code of Federal Regulations.
- **US security regulations apply to all aircraft flying in US airspace, including foreign carriers.**

PPD-21 assigns **both** the **Department of Homeland Security** and **Department of Transportation** **Sector-Specific Agencies** for the transportation sector.

#	Sector	Specific Agency	Sector
1	Agriculture		Food & Agriculture
2	Defense		Defense Industrial Base
3	DHS		Chemical Sector
4	DHS		Commercial Facilities
5	DHS		Communications
6	DHS		Critical Manufacturing
7	DHS		Dams
8	DHS		Emergency Services
9	DHS		Information Technology
10	DHS		Nuclear Reactors, Materials, & Waste
11	DHS & DOT		Transportation Systems
12	DHS & GSA		Government Facilities
13	Energy		Energy
14	EPA		Water & Wastewater Systems
15	HHS		Healthcare & Public Health
16	Treasury		Financial Services

Aviation Infrastructure

- DHS has delegated SSA responsibilities for the aviation subsector to the **Transportation Security Administration**.
- The Department of Transportation has likewise delegated SSA responsibilities to the **Federal Aviation Administration**.

Homeland Security & Cybersecurity

Aviation Infrastructure

While the post-9/11 transformation of physical security brought about by TSA at the nation's airports has received wide public attention, **cybersecurity measures have received much less notice; that is until recently.**

8

Esc

8

Aviation Infrastructure

In April 2015, a passenger was removed from a flight after tweeting **that they could hack the airplane's in-flight entertainment system.**

9

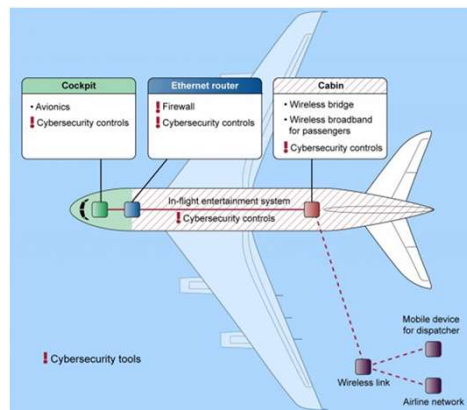

Esc

9

Aviation Infrastructure

The passenger claimed they were able to **access the aircraft's Thrust Management System** and order one of its engines to increase thrust for a climb, resulting in a temporary yaw.

10

Homeland Security & Cybersecurity

Aviation Infrastructure

While the aircraft designer asserted the claim was false, the passenger was still barred from ever flying with that airline.

Homeland Security & Cybersecurity

Aviation Infrastructure

The concern is that new generation **electronic-enabled aircraft**, and older retrofitted aircraft, have **incorporated an unprecedented amount of commercial networking technology into their systems**, and thereby introduced potential new avenues of cyber attack.

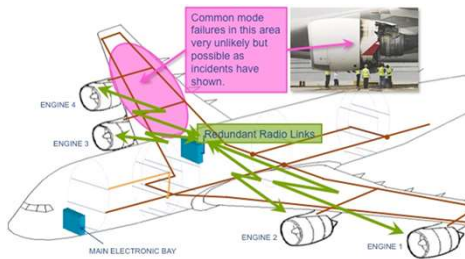

12

Esc

12

Aviation Infrastructure

- Understandably, aircraft designers seek to install wireless networking components to **save weight** and increase efficiency.
- Wireless systems **reduce the amount of wiring** within an aircraft, thereby saving weight, lowering fuel consumption, and saving costs.

13

Esc

13

Aviation Infrastructure

Similarly, e-enabled aircraft can download their maintenance and supply requirements before reaching their gate, reducing turn-around time, also saving costs.

14

Esc

14

Aviation Infrastructure

While wireless technology undeniably saves money, it **also creates new vulnerabilities not present in past aircraft** that may have significant impact on aircraft safety.

15

Esc

15

Aviation Infrastructure

For example, the connection between aircraft and ground systems creates an exposed link that may be susceptible to exploit; and **internal networking may create an avenue for attacking critical avionics from less critical and thus less protected onboard systems.**

Homeland Security & Cybersecurity

Pilot's Role

- Pilots are responsible for safe and secure flight operation.
- Flight crews have no training or capability to detect cyber-attack.**
- One defense contractor is developing an on-board intrusion detection system to warn of "anomalous" behavior.
- Another defense contractor is developing a "hardwire" control system that is physically isolated from other components.

Cockpit, Boeing 737-Max.

Homeland Security & Cybersecurity

Aviation Infrastructure

- Out of concern for these emerging threats, in 2004 the Department of Homeland Security National Cybersecurity Division within the National Protection and Programs Directorate established a Control Systems Security Program.
- As a result of this program, in 2009 the Industrial Control System Joint Working Group was created to encourage the design, development, and deployment of enhances security for control systems.

Homeland Security & Cybersecurity

Aviation Infrastructure

- In 2011, the working group released a Cross-Sector Roadmap for Cybersecurity.
- This in turn spawned the **Roadmap to Security Control Systems in the Transportation Sector, a voluntary plan** for improving industrial control system cybersecurity across all transportation modes, including aviation.
